PROFESSIONAL PROFILE

I'm passionate about finding the data point that changes a decision. I've built my path in data hands-on: I've taken three complete projects — Formula 1 telemetry, satellite ocean data (NOAA/Copernicus) and road-accident analytics (AUSA) — from ingestion and cleaning all the way to ML models and dashboards deployed in production. My development background lets me implement end-to-end solutions: from the data lake to the model, and from the model to the web.

EXPERIENCE

Data Engineer / Data Scientist | Personal Project — F1 Telemetry & Strategy Platform

2026 · Buenos Aires

- Data pipeline over 3 complete Formula 1 seasons (2024–2026): automated ingestion with FastF1 and GitHub Actions, 37M+ telemetry rows in an AWS S3 data lake with a medallion architecture (bronze/silver in Hive-partitioned Parquet), processed with PySpark.
- Data Warehouse in BigQuery (gold layer, 58,500+ laps) feeding a Looker Studio dashboard on tyre degradation and race strategy.
- XGBoost tyre-degradation model with fuel correction: 0.678 s MAE vs. a 0.814 s baseline (16.7% improvement) validating on unseen circuits; optimal pit-stop window analysis against 1,068 real pit stops.
- Web dashboard in production (Next.js/TypeScript): interactive telemetry with Recharts, an SVG track minimap and a 3D viewer (React Three Fiber), serving Parquet data from S3 through a custom API with read-only IAM credentials.

Data Scientist | Personal Project — Marine Anomaly Detection (Mar del Plata coast)

2026 · Buenos Aires

- End-to-end pipeline over 20+ years (2003–2024) of NOAA and Copernicus Marine satellite data (sea-surface temperature, salinity, wave height): ETL with Python (xarray, Pandas) and loading of 6.3M+ records into PostgreSQL (Docker).
- Unsupervised ML with Isolation Forest (univariate and multivariate) to detect marine heatwaves, validated against real documented events: the 2017 record heatwave flagged at a 33.7% anomaly rate vs. a 5% baseline.
- Time-series forecasting with SARIMA (statsmodels) projecting monthly sea temperature for 2025–2026 with 95% confidence bands.
- Power BI dashboard (KPIs, yearly anomaly trends, 961-point grid map) and a full-stack app in production: FastAPI backend (Render) + Next.js/TypeScript frontend (Vercel) with a live anomaly detector.

Full Stack & Web Developer | Freelance

Oct 2025 — Present · Buenos Aires

- Design and implementation of relational data architectures (PostgreSQL/Supabase) supporting the daily operations of 3 clients in production.
- Development of 3 complete real estate platforms (industry SMBs) with Next.js and TypeScript, including a self-service back office for inventory management that removes third-party dependence.
- Next.js SSR/SSG architecture and technical SEO focused on load speed and organic ranking; CI/CD with Vercel.

Data Scientist / Data Analyst | UADE — Academic Project (AUSA)

Jul 2025 — Oct 2025 · Buenos Aires

- Comprehensive analysis of road accidents on CABA highways using real AUSA data: full ETL pipeline with Pandas (cleaning, imputation and transformation of 2,200+ records).
- Random Forest classification model to predict accident severity (Severe vs. Minor); decision threshold optimization achieved +14% detection of severe cases (78% recall).
- Forecasting with XGBoost Regressor to project daily incident volume and optimize patrol and tow-truck distribution.
- Interactive Looker Studio dashboard, plus proactive outreach to a government entity (AUSA) to obtain GeoJSON data not publicly available.

Intensive Data Science Upskilling

Feb 2025 — Jun 2025 · Buenos Aires

- Full-time focus on university coursework (UADE) and data specialization: IBM Python for Data Science certification and an AWS cloud fundamentals course.

Administrative & Operations Manager | Topazio Residence

Oct 2022 — Jan 2025 · San Bernardo del Tuyú

- Tracking of operational KPIs and billing control as the basis for data-informed decisions and team coordination during peak seasonal demand.
- Issue resolution under pressure, developing fast diagnostic skills and a customer-focused orientation.

SKILLS

Programming Languages: Python, SQL, TypeScript, HTML/CSS
Data & ML: Pandas, NumPy, PySpark, Scikit-learn, XGBoost, Random Forest, Isolation Forest, SARIMA (statsmodels), xarray
Data Engineering & Cloud: AWS S3 (data lake), BigQuery, Parquet, GitHub Actions, Docker, Cloud Hosting (Vercel, Render)
Visualization & BI: Power BI, Looker Studio, Tableau, Matplotlib, Seaborn, Recharts
Databases: PostgreSQL, Supabase, MongoDB
Web: Next.js, FastAPI, React Three Fiber, CI/CD
Tools: Git, GitHub, Jupyter Notebook, Excel, Linux, AI Tools, Trello

EDUCATION

University Technical Degree in Software Development — UADE · 75%+ completed
Google Advanced Data Analytics, Professional Certificate — Coursera · In progress · expected completion: 2026
Python for Data Science — IBM Skills Network · Earned: 2025

LANGUAGES

Spanish (Native) · English (Advanced)

SOFT SKILLS

Problem Solving · Analytical Thinking · Adaptability & Learning · Clean Code · Agile Methodologies · KPI Management · Results-Oriented · Proactive · Business Vision
